About Us

Efficient Development. Scalable Results

Software House

Welcome to Our Portfolio!

Digifolks is a Yogyakarta-based software house dedicated to delivering functional and purposeful digital solutions for businesses of all scales. We synergize technical expertise with a profound understanding of market dynamics to engineer systems that go beyond optimal performance—providing tangible value to our clients' operational efficiency.

In every project, we employ a methodology centered on technical precision and comprehensive requirement analysis. Our team is committed to deconstructing the unique challenges faced by our partners, ranging from complex internal management systems to the optimization of digital presence in competitive markets. Through a measured and data-driven approach, we ensure that every solution aligns seamlessly with the company's strategic objectives.

We are committed to building robust technological infrastructures prepared for future challenges. Our primary focus is creating scalable software, ensuring that systems evolve alongside the growth of our clients' business operations. For us, technical stability and long-term maintainability are the fundamental pillars of every product we build.

PROBLEM

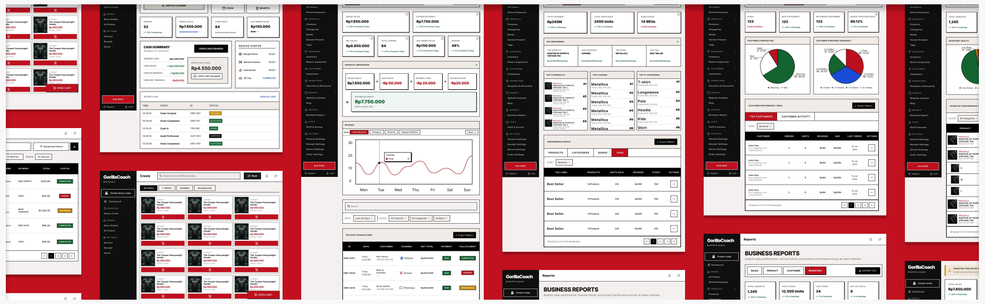
Managing retail sales, online orders, inventory, and business operations through separate systems creates data inconsistencies, duplicate administrative work, and limited visibility into overall business performance. This fragmented workflow reduces operational efficiency and impacts the customer experience.

NEEDS

A unified business management platform that centralizes point-of-sale operations, online commerce, inventory, customer data, and back-office administration into a single system with real-time synchronization.

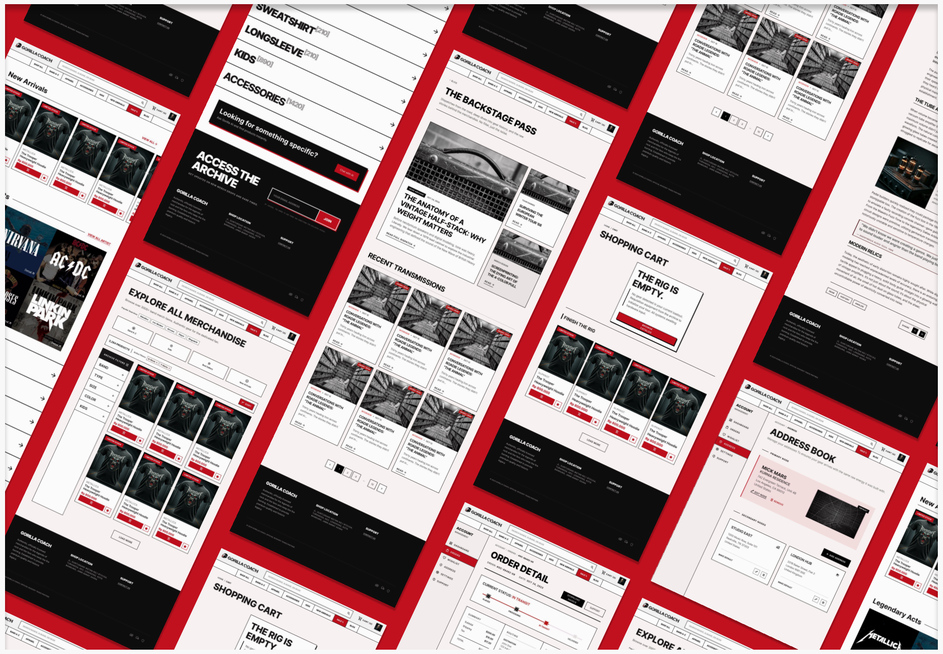
SOLUTION

We developed an integrated business platform that combines a Point of Sale (POS), Online Store, and Back Office Management System into a single ecosystem. The solution synchronizes sales transactions, inventory, product catalogs, and customer information across online and offline channels in real time. Through a centralized administrative dashboard, the Gorilla Coach team can efficiently manage daily operations, monitor business performance, and deliver a seamless purchasing experience for customers.



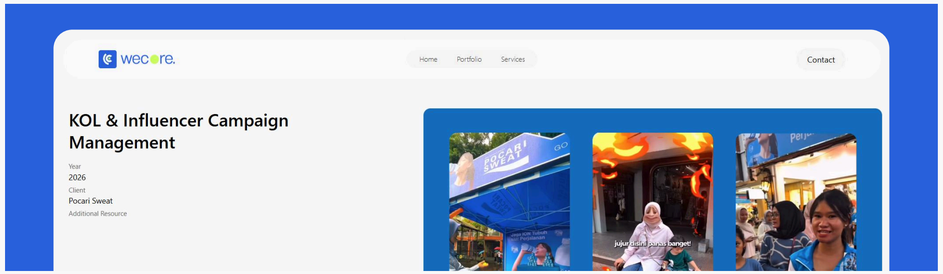
Integrated Web e-Commerce & POS System

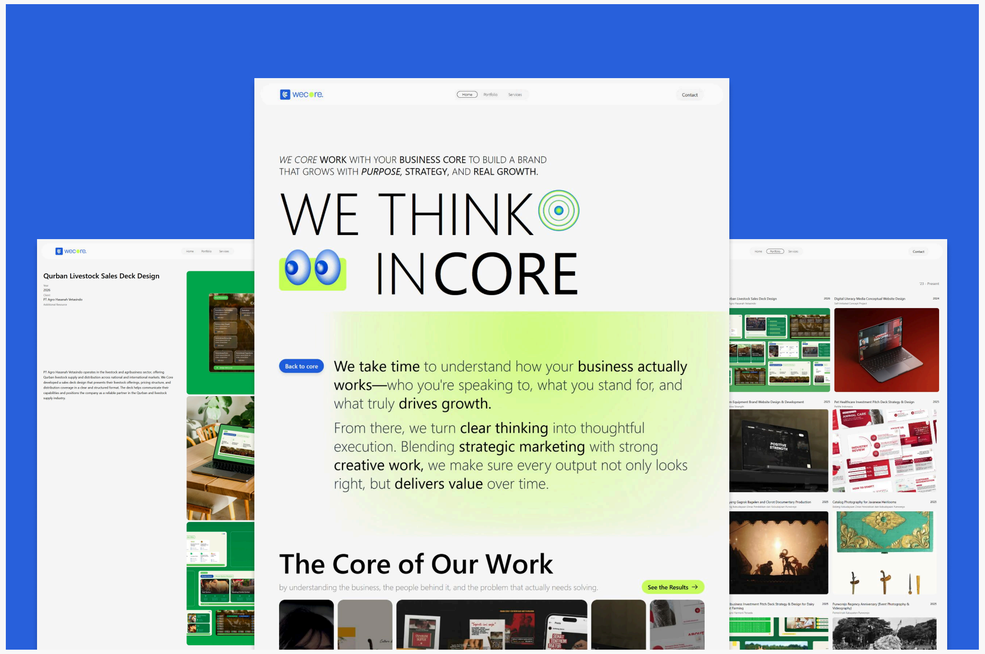
GorillaCoachID



Professional Agency Company Profile for We Core

Wisesa Cipta Karsa





PROBLEM

Agencies often struggle with low conversion rates due to static, slow-loading websites that fail to capture professional credibility, causing potential clients to lose interest before engaging with the content.

NEEDS

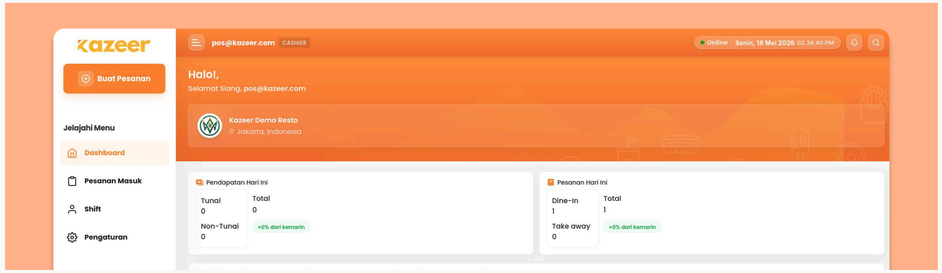
A high-performance digital presence with a seamless User Experience (UX) and an intuitive information architecture designed to build trust and maximize search engine discoverability.

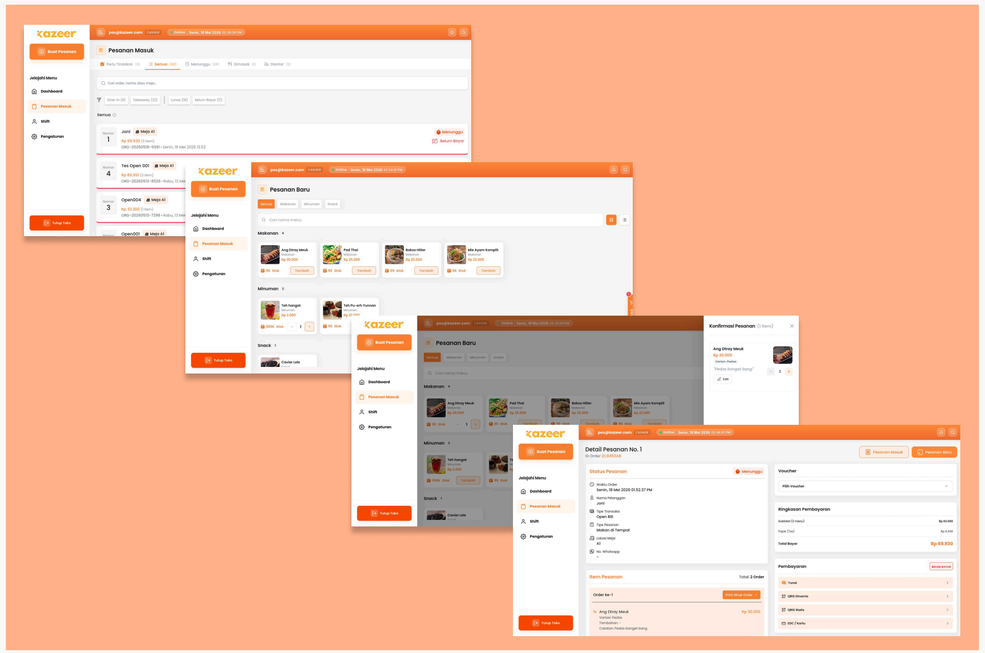
SOLUTION

We implemented a conversion-oriented UI/UX strategy combined with technical optimizations for page speed and content architecture. Our primary focus was streamlining navigation for prospective clients and boosting search engine visibility. The result is a professional website that serves as an active marketing tool, effectively transforming traffic into high-potential business leads.

Next-Generation FnB POS & AI Business Consultant

Kazeer Solusi Digital





PROBLEM

The client's point-of-sale system development was stalled by the previous vendor, resulting in unstable source code, a broken core ordering flow, and asynchronous frontend-backend communication, rendering the application non-functional.

NEEDS

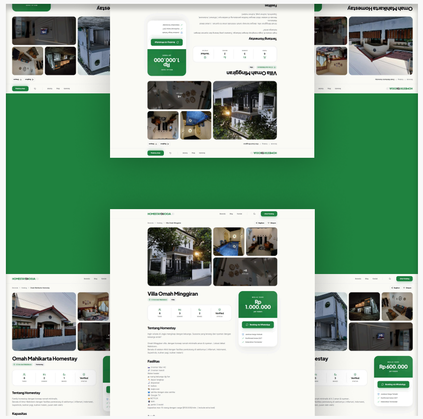
A complete code overhaul to fix the core transaction workflow, stabilize system synchronization, and integrate AI-driven business analytics.

SOLUTION

We optimized the application and performed further development, such as refining the open-bill ordering flow and integrating a local payment gateway for transaction automation. We also embedded an AI Business Consultant Chatbot via WhatsApp and the application to automate turnover analysis, stock tracking, profit and loss reporting, and real-time Cost of Goods Sold (COGS) estimation.

Digital Tourism Catalog & Management Platform

Homestaydijogja.id



PROBLEM

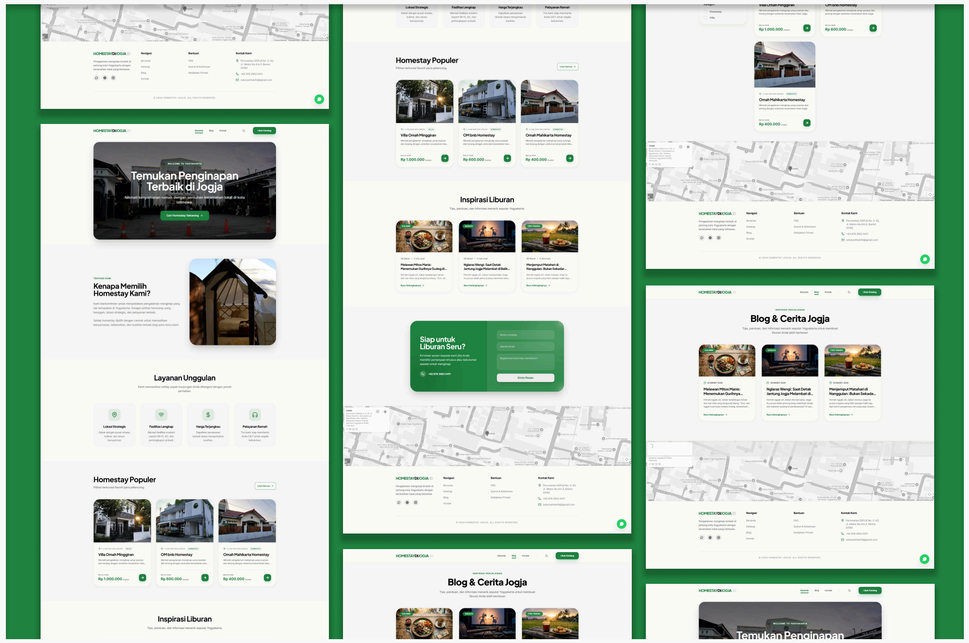
Local accommodation providers in Yogyakarta often lack a centralized digital presence, forcing them to rely heavily on third-party booking platforms with high commission fees that erode their profit margins.

NEEDS

An independent, informative catalog system with seamless navigation for travelers and a robust backend infrastructure that allows managers to maintain full control over their property content.

SOLUTION

We developed a high-performance digital catalog focused on local SEO and user-centric navigation. The system integrates a custom CMS, enabling real-time updates for unit details, amenities, and pricing. Built with a lightweight and responsive architecture, the platform ensures rapid access for travelers, serving as a powerful alternative to third-party dependencies.



PROBLEM

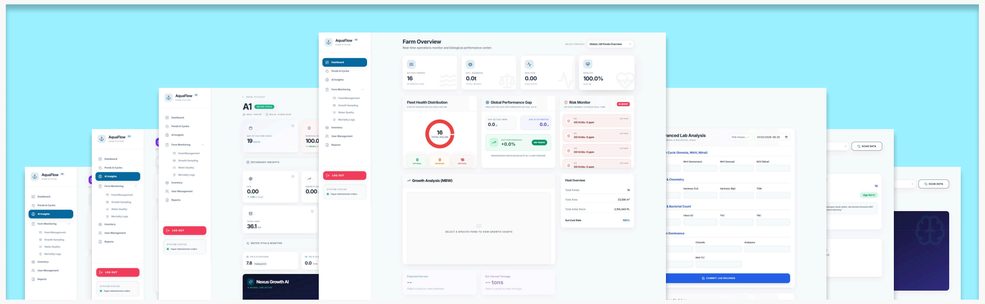
Shrimp farmers face significant risks of harvest failure due to unmonitored water quality parameters and the difficulty of generating accurate growth predictions from data often skewed by outliers.

NEEDS

A centralized digital command center capable of integrating daily operational data—such as feed, water quality, and sampling—with Artificial Intelligence to provide early environmental risk detection and cultivation strategy optimization.

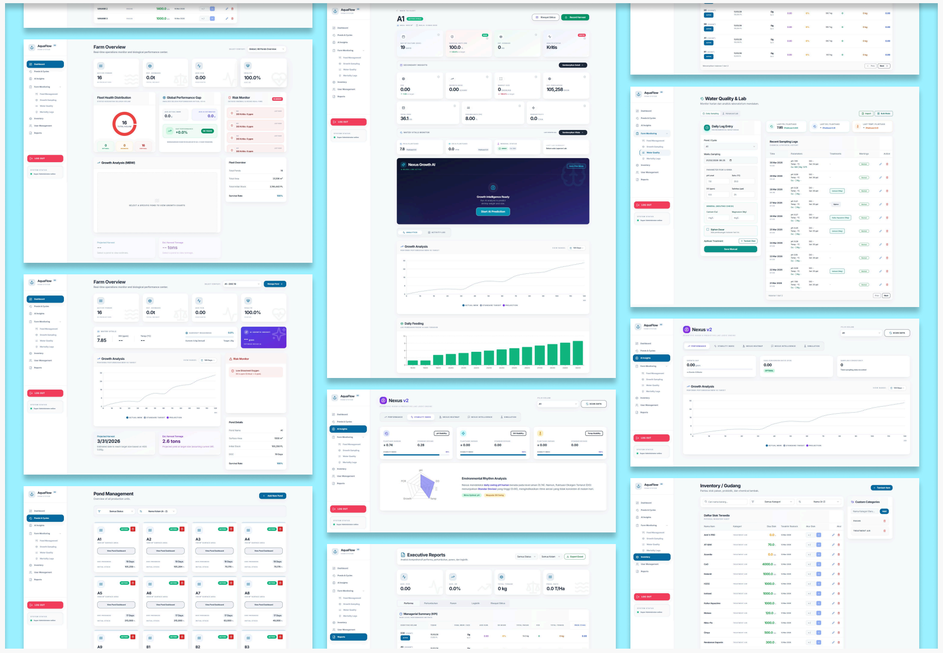
SOLUTION

We engineered a comprehensive digital ecosystem that digitizes the entire shrimp farming lifecycle, featuring real-time water quality monitoring and automated daily feed management. At its core, we integrated AI to analyze multidimensional relationships between environmental variables and shrimp biomass, delivering high-precision managerial insights. The system is fortified with atomic inventory management to prevent race conditions and an automated risk dashboard, ensuring operational efficiency and biological stability throughout every cultivation cycle.



Smart Aquaculture Decision Support System

Kawan Kita Semua



Scalable Business Website for Positive Strength

Positif Kuat Bersama

PROBLEM

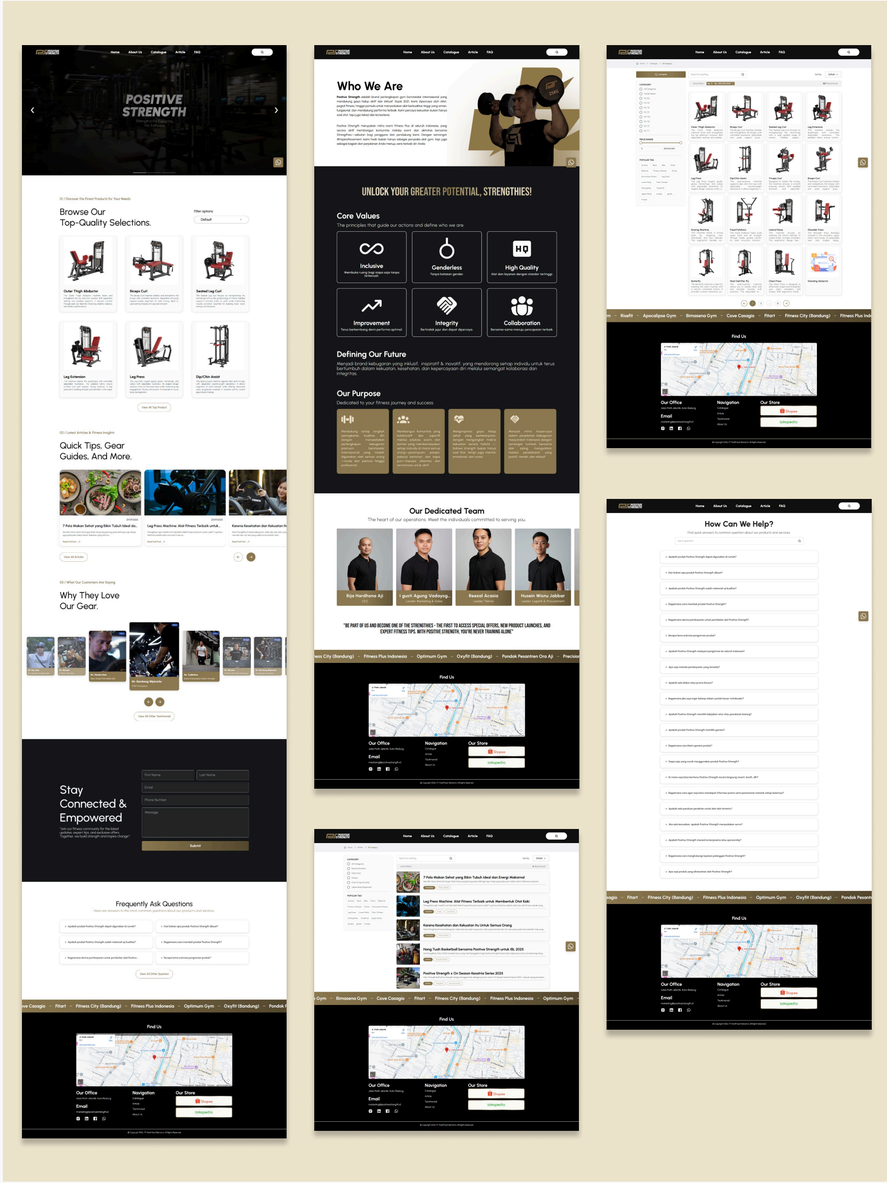
Gym equipment suppliers often encounter critical technical bottlenecks and site crashes during high-traffic growth phases, leading to lost sales opportunities and a degraded brand reputation.

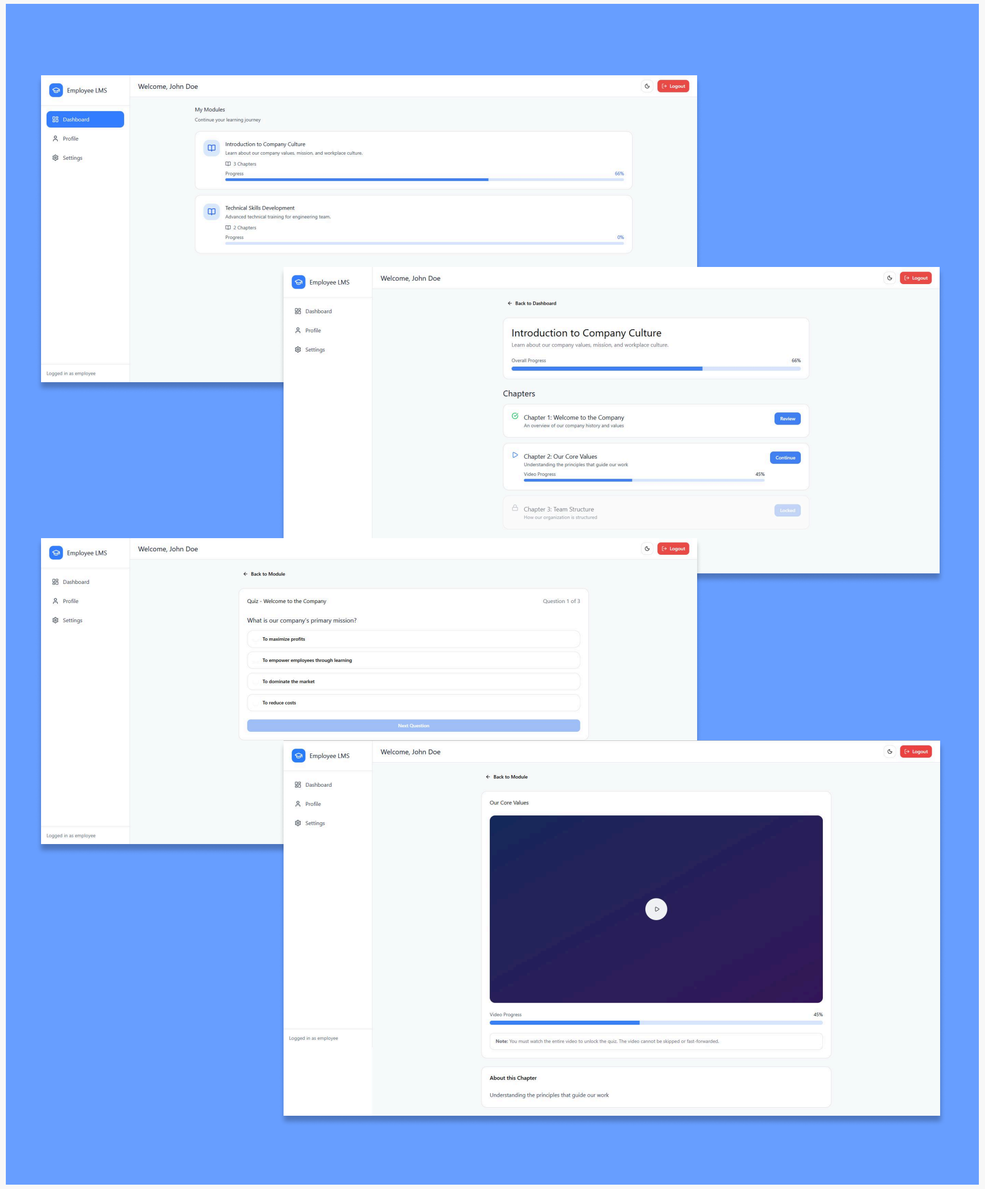
NEEDS

A future-proof digital foundation that offers seamless product catalog management and the elastic capacity to handle expanding market reach without compromising performance.

SOLUTION

We engineered a robust web infrastructure utilizing a scalable architecture and a flexible CMS. This system empowers the client with autonomous catalog control while ensuring consistent platform stability during traffic surges. By prioritizing a modular design, we ensured that future feature expansions can be integrated seamlessly without rebuilding the core system, securing long-term operational efficiency.





Web-Based App Digital Assessment for Prospective Client

Professional Portfolio For Stakeholder Proposals

PROBLEM

Traditional evaluation methods are often plagued by labor-intensive administration and inherent human bias, leading to inconsistent results and fragmented data that hinder objective performance tracking.

NEEDS

A centralized, high-integrity assessment framework capable of automating complex scoring workflows while delivering real-time, data-driven insights to support critical organizational decisions.

SOLUTION

"We developed a web-based assessment application designed to digitize the entire employee evaluation lifecycle. The platform integrates comprehensive question bank management, automated scoring, and real-time analytical dashboards. This solution eliminates manual administrative bottlenecks, enhances data integrity, and empowers management to make objective, data-driven decisions at an accelerated pace."

Integrated Learning Platform for Prospective Client

Professional Portfolio For Stakeholder Proposals

PROBLEM

Digital educational ecosystems are often fragmented, forcing users to navigate between disconnected platforms for course materials, classroom management, and examinations, which leads to a disjointed and frustrating learning experience.

NEEDS

A unified, all-in-one digital environment that consolidates the entire educational lifecycle—from initial enrollment to final assessment—into a single, high-performance system.

SOLUTION

We engineered an integrated digital ecosystem that merges high-quality video streaming, classroom management, and assessment tools into a unified portal. By consolidating the full user journey, we ensured a seamless transition from registration to evaluation. The system is designed with a centralized architecture to simplify operational control while significantly driving user engagement and retention.
